PROFESSIONAL SUMMARY

Frontend / CMS Developer with 3+ years of experience building production WordPress and AEM websites. Strong in Figma-to-code implementation, custom WordPress themes, ACF-based content systems, AEM components, API integrations, technical SEO, and frontend performance optimization. Delivered 7 live WordPress sites for yacht charter and real estate clients, including booking and listing workflows powered by third-party APIs. Currently supports a UK digital agency as a freelancer across 30+ client sites.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, SCSS, JavaScript (ES6+), TypeScript, jQuery, React.js, responsive design, mobile-first development

WordPress: Custom themes, Gutenberg (custom blocks, block patterns, theme.json), custom post types and taxonomies, ACF Pro (incl. ACF blocks), WooCommerce, Gravity Forms, WP REST API, performance optimization

Page Builders: Elementor, Divi, WPBakery, Oxygen, Gutenberg block editor

Adobe Experience Manager: AEM components, templates, dialogs, workflows, HTL / Sightly, Sling Models, OSGi, CRXDE, JCR

Backend: PHP, Laravel, Java, MySQL, Groovy scripts

Tools / DevOps: Git, GitHub, CI/CD workflows, Azure DevOps, Jira, ClickUp, cPanel, Figma, Photoshop, FileZilla / SFTP, WP Engine, HostArmada, SiteGround, Cloudways

SEO / Performance: Technical SEO audits, Screaming Frog, Yoast SEO, Rank Math, schema markup, Core Web Vitals, PageSpeed Insights, WP Rocket, Google Tag Manager (GTM)

AI-assisted development: Claude, ChatGPT, Codex, Gemini for debugging, code review, documentation, and faster implementation

WORK EXPERIENCE

Freelance WordPress Developer

Self-employed (UK agency clients) | Aug 2026 - Present

- Provide ongoing WordPress development and technical SEO support to a UK-based digital agency on a monthly retainer, across 30+ client sites in manufacturing, IT services, events, finance, and B2B SaaS.
- Set up a WooCommerce store for an industrial equipment dealer, building out the product catalogue and replacing 150+ product images with optimized versions.
- Built Gravity Forms lead capture and quote request forms, including replacing five third-party chatbot widgets with native forms, conditional fields, notifications, confirmations, and mobile styling.
- Improved page speed and Core Web Vitals by fixing render-blocking and delayed scripts, animation-gated LCP, tag loading, and caching setup across WP Rocket and Breeze.
- Optimized images at scale: compressed, resized, and converted hundreds of media library images to WebP, repointing every page reference and keeping alt text intact.
- Resolved technical SEO issues from Screaming Frog audits: canonicals, page titles and meta descriptions, broken and redirected links, trailing-slash 301s, sitemaps, pagination, alt text, duplicate H1s, schema, and security headers. Traced 491 URLs with duplicate <body> tags to one shared template component and fixed them all at once.
- Built pages, case studies, landing pages, and blog posts from Figma designs and client briefs in Gutenberg, Elementor, Divi, WPBakery, and Oxygen, including a block-editor homepage rebuild and custom ACF blocks.
- Shipped changes through staging with SFTP packages and rollback copies, and caught injected malicious scripts in client theme files.

Frontend WordPress Developer

Ankor / Ingnius | Oct 2025 - Sep 2026

- Delivered 7 production WordPress websites end-to-end for yacht charter and real estate clients, from Figma design handoff through live deployment.
- Built Split Yacht Charter as a WooCommerce-based booking platform integrated with the NAUSYS API, covering real-time availability, dynamic pricing, yacht listings, and booking workflows.
- Integrated third-party APIs and live data feeds for EJ Yachts and Iman Real Estate, enabling dynamic property and vessel listings with less manual content work.
- Developed multiple custom post types and taxonomies with ACF-driven archive and single templates, reusable PHP helpers for queries, image handling, and component rendering, plus secure AJAX search, filtering, and load-more features.

- Architected editor-friendly ACF Pro content structures, making recurring content updates easier for non-technical users.
- Improved frontend performance through image and asset optimization, lazy loading, minification, and semantic markup, consistently targeting 85+ Google PageSpeed scores.
- Managed staging and production deployments across WP Engine, HostArmada, and SiteGround, including SFTP migrations and post-launch debugging.
- Worked through feature branches, pull requests, and GitHub Actions CI/CD while reviewing code for responsiveness, standards, and performance.

SELECTED PRODUCTION PROJECTS

- [Polaris Yacht Charter](#) - WordPress yacht charter site delivered from Figma to production.
- [Mint Charter](#) - WordPress yacht charter site with responsive frontend implementation.
- [Blu Cove Yachting](#) - WordPress yacht charter site built from Figma design through to live deployment.
- [Split Yacht Charter](#) - Booking platform integrated with NAUSYS API for availability, pricing, yacht listings, and booking workflows.
- [EJ Yachts](#) - Dynamic yacht listing website using third-party data integrations.
- [Iman Real Estate](#) - Real estate listing website with live data feeds and editor-friendly content management.
- [Veladare](#) - Custom WordPress yacht platform with CPTs, ACF-driven templates, reusable components, AJAX features, and responsive frontend implementation.

Webmaster & AEM Developer (Full-Stack)

Evoke | Jul 2023 - Oct 2025

- Designed and built custom AEM components, templates, workflows, and dialogs from scratch for enterprise-scale content requirements.
- Developed Sling Models, servlets, and OSGi services in Java to support dynamic content delivery and reduce hardcoded frontend dependencies.
- Led website migrations into Adobe Experience Manager, managing JCR content structures and maintaining data integrity during transitions.
- Authored Groovy scripts for debugging, environment configuration, and data migrations, reducing manual release and troubleshooting effort.
- Implemented Adobe Target for audience-based personalization and A/B testing, supporting data-driven UX optimization.
- Worked in Agile sprint cycles using Jira and Azure DevOps, contributing to sprint planning, bi-weekly deployments, and code reviews.
- Resolved day-to-day Jira tickets covering content updates, frontend defects, CMS issues, and production support requests.
- Recognized as Best Performer of 2024 within the development team.

Frontend Web Developer (WordPress)

Taocrowd | Aug 2022 - May 2023

- Converted PSD and Figma designs into fully responsive, cross-browser-compatible WordPress websites using custom themes.
- Optimized frontend code and imagery for faster page loads, stronger Lighthouse scores, and better visual quality across client projects.
- Maintained multiple client websites simultaneously while preserving brand consistency and design accuracy across deliverables.
- Completed day-to-day Salesforce tickets for website updates, frontend fixes, and client support requests.
- Processed and optimized web imagery using Photoshop to support faster page performance and production-ready presentation.

EDUCATION & CERTIFICATIONS

Bachelor of Computer Engineering: Malayan Colleges of Laguna | 2018 - 2020

Full-Stack Web Development Bootcamp: KodeGo | May 2022 - Aug 2022 | Certificate of Completion | 2x Best in Project Award

PROFESSIONAL STRENGTHS

- Works independently with minimal supervision and communicates blockers early.
- Strong attention to detail in responsive implementation and design accuracy.
- Effective at troubleshooting cross-browser, performance, and frontend issues.
- Learns unfamiliar tools and codebases quickly, including through AI-assisted development.
